DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-12 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-17 of copending Application No. 10/729,875. Although the conflicting claims are not identical, they are not patentably distinct from each other because:

Claims 1-12 are anticipated by claims 1-17 of application '875, since applying a programming pulse and at least one additional programming pulse to those memory cells in claims 1-17 of application '875 are species of "applying at least one first programming pulse and at least one second programming pulse to those memory cells" recited in claims 1-12; and varying substantially at each programming pulse, a voltage applied to a control electrode of the

memory cells of the group in claims 1-17 of application '875 are species of "varying voltage applied to a control electrode of the memory cells between the at least one first programming pulse and the at least one second programming pulse" recited in claims 1-12.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Shibata et al. (US 6,426,892) disclose a nonvolatile memory device for storing multivalued data.

Gorman (US 6,101,125) discloses a method programming an electrically programmable memory.
